

ExpressNet Key Features

A Total Solution

ExpressNet provides a complete solution for providing High-Speed Internet Access to the guestroom. Just integrate the router of your choice to begin delivering a trouble-free amenity that sets you apart from your competition.

Affordability

At under USD\$200 per room, ExpressNet is the economical High-Speed Internet Access solution you need. Why pay for more bandwidth that you can use (or your guests demand?) ExpressNet is the right technology at the right price.

Uses Existing Wiring

ExpressNet provides high-speed access over your existing wiring infrastructure, so there's no expensive recabling necessary. It all works through the same phone wiring you already have.

Single Cord Convenience

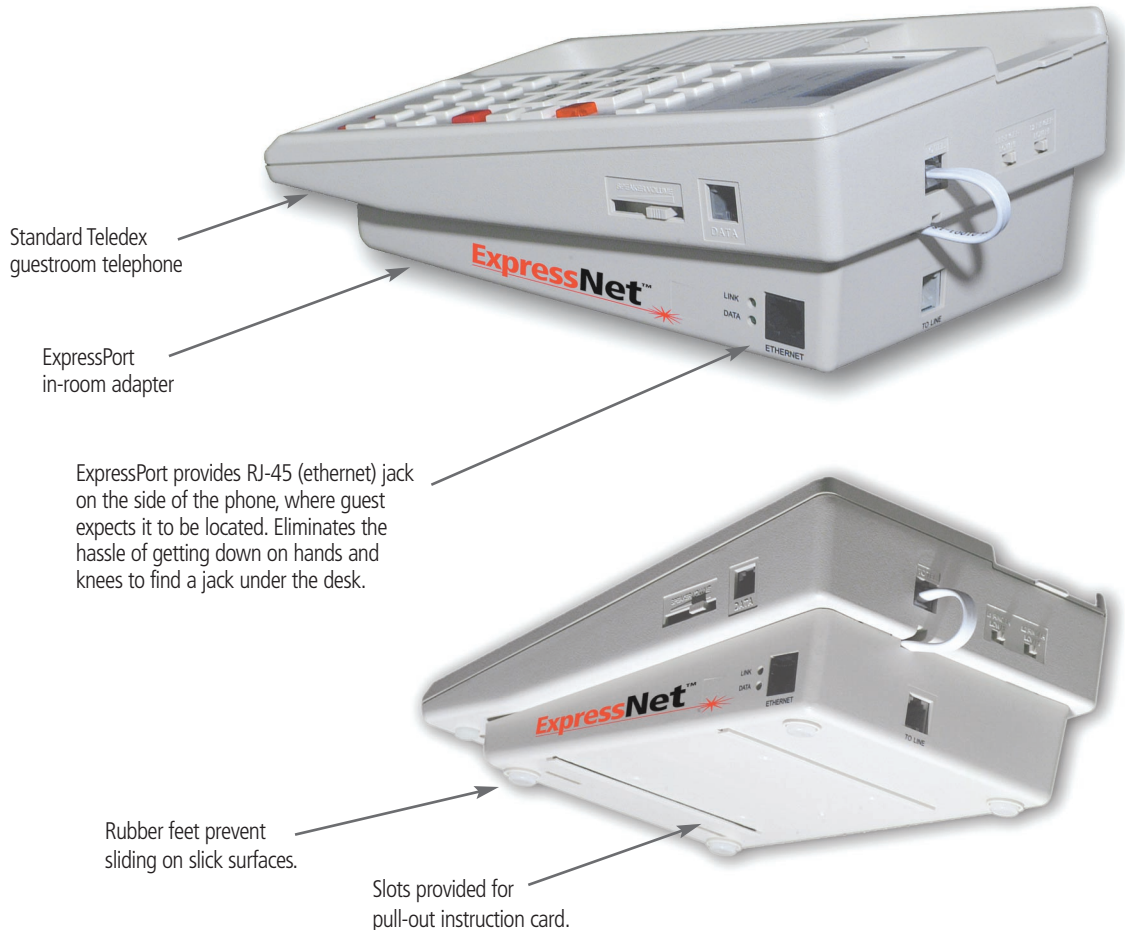

The ExpressPort adapter attaches directly to the underside of most Teledex telephones, taking up no more space on the desktop. What's more, Teledex's single-cord power adapter provides both power and phone line connection in one cable, eliminating tangled wire mess and confusion.

Flexibility and Security

Because ExpressNet is based on non-proprietary technologies, your investment is protected from becoming yesterday's news. You can be sure that the solution you provide today will be just as viable years down the road.

Integrated ExpressPort Adapter

Attaches to the underside of most Teledex telephones to provide a convenient endpoint interface. EasyAccess RJ-45 jack allows for simple laptop connectivity. All-in-one design doesn't increase telephone footprint even a single millimeter, reducing clutter and saving space!

ExpressNet™

There's nothing like a technology that's just right for its intended application. That's the value of ExpressNet from Teledex.

It's an economical, hassle-free high-speed Internet access solution for hotels and motels. Forget expensive HSIA solutions that provide more bandwidth than your guests really need.

ExpressNet delivers 1 MBPS of reliable high-speed access to the ExpressPort tucked underneath your guestroom telephone, providing a highly positive guest experience, whether checking email or surfing the web. It all installs in a snap, and works over your existing phone lines, so there's no expensive recabling to worry about.
